

## TR-CES2708 Series

### Industrial Grade Carrier Ethernet Series

#### Product Overview

Techroutes CES2708 series—the industrial carrier Ethernet switches are small but power full switches designed for carrier 3G/4G backhaul networks.

With the unified operation, the equipment can make better use of themselves. CES2708 series adopt patented ORING+™ self-healing rings. It's hardware-based algorithm ensures the fail-over time in every node less than 5ms and the network self-healing time less than 50ms (typical value).

CES2708 also supports IEC62439-2 based MRP, IEC62439-3 based PRP, and HSR.

CES2708 switches adopt the half-rack frame and support 8x100/1000M SFP slots, or 4 x 10/100/1000M electrical ports and 4 x 100/1000M SFP slots which makes network establishment more flexible and prompt.

CES 2708 Switches designed to withstand in harsh environment, the fan less design switch supports operational temperature range of - 40°C to 70°C
